Aim of the experiment

To show the effect of sunlight on the growth of plants.

Things needed

Two containers, cotton, water, sunlight and mustard seeds.

Method

Take two containers. Keep some cotton and sprinkle water on them. Scatter some mustard seeds on the damp cotton. Once the seeds start germinating, sprinkle some water on them. Keep one container in the dark and the other one in sunlight. Observe the changes in both the containers for a few days.

Observation

Conclusion
