INDIAN SCHOOL MUSCAT
FIRST PRE- BOARD EXAMINATION
JANUARY 2020

## CLASS XII

Marking Scheme - PHYSICS [THEORY]

| Q.NO. | Answers | Marks (with split up) |
| :---: | :---: | :---: |
| 1. | ( c ) | 1 |
| 2. | (d) | 1 |
| 3. | ( C) | 1 |
| 4. | (b) | 1 |
| 5. | (c) | 1 |
| 6. | (b) | 1 |
| 7. | (b) | 1 |
| 8. | (d) | 1 |
| 9. | (a) | 1 |
| 10. | (d) | 1 |
| 11. | Paramagnetic substance | 1 |
| 12. | Radial | 1 |
| 13. | Angle of dip | 1 |
| 14. | Negative <br> OR <br> Scattering | 1 |
| 15. | Becquerel | 1 |
| 16. | Neutrinos are mass less, have no charge and do not interact with matter | 1 |
| 17. | By using laminated core | 1 |
| 18. | Decreases <br> OR <br> Definition of barrier potential | 1 |

\begin{tabular}{|c|c|c|}
\hline 19. \& \begin{tabular}{l}
Statement of Ampere's circuital Law OR \\
Statement Biot-Savart law.
\end{tabular} \& 1 \\
\hline 20. \& \(\mathrm{P}=\mathrm{V}_{\mathrm{rms}} \mathrm{X} \quad \mathrm{I}_{\text {rms }} \mathrm{x} \cos \pi / 2=0\) \& 1 \\
\hline 21. \& \begin{tabular}{l}
As the both 3 uF capacitors are connected in parallel, so net capacitance between branch \(\mathrm{EH}=3+3=6 \mu \mathrm{~F}\) Similarly, capacitance 2 uF and 1 uF at the corner B are also connected in parallel, so the net capacitance of branch FG \(=2+1=3 \mu \mathrm{~F}\) \\
If reconstruct the given figure according to the above calculations, we can see that \(6 \mu \mathrm{~F}\) capacitor and \(3 \mu \mathrm{~F}\) capacitor ar connected in series and another 2 uF capacitor is connected in parallel with both of them. \\
Hence net capacitance Between D and C \(=2+3 \times 63+6=2+2=4 \mu \mathrm{~F}\) \\
The total capacitance of the circuit, Cnet \(=4 \mu \mathrm{~F}\) \\
Total voltage applied, \(V=100 \mathrm{~V}\) \\
Energy stored in the network \(=12\) CnetV2 \(=12 \times 4 \times 10-6 \times(100) 2=0.02 \mathrm{~J}\)
\end{tabular} \& 1

1 <br>

\hline 22. \& | Principle of potentiometer |
| :--- |
| (i) By increasing the total length of wire, keeping terminal voltage constant |
| (ii) By connecting a suitable extra resistance R in series with potentiometer. So, less amount of the current flows through the potentiometer wire. | \& 1

$1 / 2$
$1 / 2$ <br>

\hline 23. \& | $\mathrm{r}_{\alpha} / \mathrm{r}_{\mathrm{p}}=2 / 1$ with calculation |
| :--- |
| OR |
| Paramagnetic material |
| Diagram of magnetic lines through Paramagnetic material | \& 2

1
1 <br>

\hline 24. \& | (a) two conditions of TIR |
| :--- |
| (b) $\mathrm{n}=1 / \operatorname{sini}_{\mathrm{c}}$ | \& 1 <br>

\hline 25. \& | Statement of Brewster's law |
| :--- |
| Since refractive index is different for different colour, Brewster's angle is different for different colours. | \& <br>

\hline 26. \& | (a) Saturation or short range nature of nuclear forces. |
| :--- |
| (b) To show that the density of nucleus over wide range of nuclei is constant independent of mass number $\mathbf{A}$. | \& 1

1 <br>
\hline
\end{tabular}

|  | OR <br> $\lambda_{\text {min }}=8.18 \times 10^{-7} \mathrm{~m}$ after calculation <br> IR region | $\begin{aligned} & 11 / 2 \\ & 1 / 2 \end{aligned}$ |
| :---: | :---: | :---: |
| 27. | Energy band diagram of n-type and p-type semiconductor with marking of donor and acceptor level | $\begin{aligned} & 1 / 21 / 2 \\ & 1 / 21 / 2 \end{aligned}$ |
| 28. | (i) Gauss's Law in electrostatics states that the total electric flux through a closed surface enclosing a charge is equal to $\frac{1}{\varepsilon_{0}}$ times the magnitude of that charge. $\phi=\oint_{s} \vec{E} \cdot \overrightarrow{d S}=\frac{q}{\varepsilon_{0}}$ <br> (ii) Net flux $\phi=\phi_{1}+\phi_{2}$ <br> where $\phi_{1}=\vec{E} \cdot \overrightarrow{d S}$ $\begin{aligned} & =2 a C d S \cos 0^{\circ}=2 a C \times a^{2}=2 a^{3} C \\ \phi_{2} & =a C \times a^{2} \cos 180^{\circ}=-a^{3} C \\ \phi & =2 a^{3} C+\left(-a^{3} C\right)=a^{3} C \mathrm{Nm}^{2} \mathrm{C}^{-1} \end{aligned}$ <br> (iii) Net charge ( $q$ ) $=\varepsilon_{0} \times \phi=a^{3} C \varepsilon_{0}$ coulomb $q=a^{3} C \varepsilon_{0}$ coulomb. | $1 / 2$ <br> 2 <br> $1 / 2$ |
| 29. | Moving coil galvanometer: <br> Diagram <br> Principle <br> working <br> cylindrical soft iron core inside the coil of a galvanometer makes the magnetic field stronger <br> OR <br> When electron revolves around a nucleus, it creates circular current around it. In this way, it is equivalent to a current carrying coil. So, it behaves as a tiny magnetic dipole <br> Derivation of $\boldsymbol{\mu}=-\left(\mathbf{e} / \mathbf{2} \mathbf{m}_{e}\right) \mathbf{L}$ <br> Negative sign indicates $\boldsymbol{\mu}$ is opposite to $\mathbf{L}$ | $\begin{aligned} & \hline 1 / 2 \\ & 1 / 2 \\ & 11 / 2 \\ & 1 / 2 \\ & \\ & 1 / 2 \\ & 2 \\ & 2 \\ & 1 / 2 \end{aligned}$ |
| 30. | In RC circuit: <br> Phasor diagram <br> (a) impedence <br> (b) Phase angle <br> OR <br> Explanation of mutual inductance <br> Expression of mutual inductance for two concentric circular coils | $\begin{aligned} & 1 \\ & 1 \\ & 1 \\ & 1 \\ & 2 \end{aligned}$ |
| 31. | (a) X-rays <br> (b) secondary emission of radiation when high energy electrons strike on high atomic no metal <br> (c) wavelength from $1 \times 10^{-11} \mathrm{~m}$ to $1 \times 10^{-8} \mathrm{~m}$ | $\begin{aligned} & 1 \\ & 1 \\ & 1 \end{aligned}$ |
| 32. | $\mathrm{v}_{\mathrm{e}}=\text { infinity }$ <br> so image formed by objective lens at focus of eye piece $\mathrm{L}=\mathrm{v}_{0}+\mathrm{f}_{\mathrm{e}}$ | 1/2 |

|  | using lens formula for objective lens $\begin{aligned} & \mathrm{v}_{0}=2.5 \mathrm{~cm} \\ & \mathrm{~L}=2.5+5=7.5 \mathrm{~cm} \end{aligned}$ | $\begin{aligned} & 2 \\ & 1 / 2 \end{aligned}$ |
| :---: | :---: | :---: |
| 33. | (a) Zener diode- <br> Circuit <br> Working <br> (b) Two advantages of using LEDs over conventional incandescent lamps. | $\begin{aligned} & 1 \\ & 2 \\ & 1 / 21 / 2 \end{aligned}$ |
| 34. | Part $A B$ represents repulsive force and Part $B C D$ represents attractive force. <br> Conclusions: <br> (1) Nuclear forces are attractive and stronger, then electrostatic force. <br> (2) Nuclear forces are charge-independent. | $1$ $1$ |
| 35. | (a) Electric $\mathbf{E}$ due to a dipole on the axial line. <br> Diagram <br> Derivation <br> (b) Graph of $\mathbf{E}$ versus $\mathbf{r}$ <br> (c) Diagrammatically represent the position of the dipole in stable and unstable equilibrium stable equilibrium $\quad \theta=0^{0}$ and $\tau=0$ along with diagram unstable equilibrium $\theta=180^{\circ}$ and $\tau=0$ along with diagram <br> OR <br> (a) Definition of the drift velocity and relaxation time. <br> (b) On the basis of electron drift, derivation for resistivity in terms of number density of free electrons and relaxation time. <br> (c) Constantan and manganin are used for making standard resistors because alloys have high resistivity negligible temperature coefficient resistance | $1 / 2$ <br> $11 / 2$ <br> 1 <br> $1 / 2^{1 / 2}$ <br> $1 / 2^{1 / 2}$ <br> $1 / 2^{1 / 2}$ <br> 3 <br> 1 |
| 36. | (a) Deduce the expression for the refractive index of glass of prism <br> Diagram <br> Derivation | $\begin{aligned} & 1 \\ & 2 \\ & \hline \end{aligned}$ |

|  | (b) Ray diagram showing the formation of image by a reflecting type telescope. <br> OR <br> (a) Young's double slit experiment <br> Diagram <br> Derivation of fringe width <br> (b) Any two characteristic features which distinguish between interference and diffraction phenomena. | $2$ <br> $1 / 2$ $21 / 2$ $1,1$ |
| :---: | :---: | :---: |
| 37. | (a) Derivation of Einstein's photoelectric equation on photon picture <br> Two features of photoelectric effect which cannot be explained by wave theory. <br> (b) A proton and $\boldsymbol{\alpha}$-particle have the same de-Broglie wavelength. Determine the ratio of their accelerating potentials. $\begin{aligned} & \mathrm{V}=\mathrm{h}^{2} / 2 \mathrm{mq} \lambda^{2} \\ & \mathrm{~V}_{\mathrm{p}} / \mathrm{V}_{\alpha}=4 \mathrm{~m} \times 2 \mathrm{q} / \mathrm{mq}=8 / 1 \end{aligned}$ <br> OR <br> Derivation of energy of revolving electron in orbit $\mathrm{E}_{\mathrm{n}}=-\mathrm{Ze}^{2} / 8 \pi \varepsilon_{0} \mathrm{r}_{\mathrm{n}}$ <br> Using Bohr postulate final expression of energy $\mathrm{E}_{\mathrm{n}}=-\mathrm{m} Z^{2} \mathrm{e}^{4} / 8 \varepsilon_{0}^{2} \mathrm{~h}^{2} \mathrm{n}^{2}$ <br> then after substituting Rydberg constant $\mathrm{E}_{\mathrm{n}}=-\mathrm{Rch} / \mathrm{n}^{2}$ <br> For Balmer series <br> $1 / \lambda=\operatorname{Rc}\left(1 / n_{f}-1 / n_{i}\right) \quad$ where $n_{f}=2$ and $n_{i}=3,4,5, \ldots \ldots \ldots$. infinity <br> Energy level diagram | 2 <br> $1 / 21 / 2$ <br> $1 / 2$ <br> $11 / 2$ <br> 3 <br> 2 |
