| 24 | The word 'OBEDIENCE' has 5 vowels - three E's, one O and one I ; it has four different consonants- $B, D, N, C$. <br> Considering 5 vowels as a block and 4 consonants as another block. The two block can be arranged in $\underline{2}$ ways. <br> Now, within the block of vowels, 5 vowels can be arranged in $\frac{\sqrt{3}}{3}$ ways. Also, within the block of consonants, 4 different consonants can be arranged in $\lfloor 4$ ways. <br> By the multiplication principle of counting, the required number of words formed $=\underline{2} \times \frac{\left[\frac{5}{3}\right.}{[3} \times \underline{4}=2 \times 5 \times 4 \times 24=960 .$ <br> (OR) <br> 3 balls can be selected from 6 red balls in ${ }^{6} \mathrm{C}_{3}$ ways. <br> 3 balls can be selected from 5 white balls in ${ }^{5} \mathrm{C}_{3}$ ways. <br> 3 balls can be selected from 5 blue balls in ${ }^{5} \mathrm{C}_{3}$ ways. <br> Thus, bv multiplication principle. <br> required number of ways of selecting 9 balls $\begin{aligned} & { }^{6} \mathrm{C}_{3} \times{ }^{5} \mathrm{C}_{3} \times{ }^{5} \mathrm{C}_{3}=\frac{6!}{3!3!} \times \frac{5!}{3!2!} \times \frac{5!}{3!2!} \\ & =\frac{6 \times 5 \times 4 \times 3!}{3!\times 3 \times 2 \times 1} \times \frac{5 \times 4 \times 3!}{3!\times 2 \times 1} \times \frac{5 \times 4 \times 3!}{3!\times 2 \times 1} \\ & =20 \times 10 \times 10 \\ & =2000 \end{aligned}$ |  |
